Air cushion film mats

Air cushion film mats in roll - aeroPOUCH - 300 m

Catalogue number: 906048

Air cushion film mats in roll. A mat of 20 pillows.

Description

WellPACKED - Devices for filling foil cushions or mats with air

A lot, more, a lot more… parcels we send every day. We want them to be well packed, secured, look great, and that packing them does not take much time. It is possible now. Everyone who will pack and everyone who will unpack the package will appreciate the functionality, economy, appearance and optimization - everyone whose package will be filled and secured with **air fillers in the form of cushions or air mats!**

Professional fillers are the showcase of your company

The offer is addressed to all companies that send parcels to their customers every day, including warehouses, stationary or online stores. The devices will work wherever from a few to even 1000 packages a day. Air fillers are the optimal solution as they do not take up much storage space and can be filled on the fly. The work is quick and clean, and the result is professional.

Safe and convenient

Foil cusions and mats perfectly absorb vibrations, protect against temperature changes, tightly fill gaps, guaranteeing safe transport. An important aspect is also the fact that air fillers do not weigh much, therefore they do not affect the weight of the shipment, and therefore do not increase its cost. The packer does not have to wrap the product many times - foil cushions or foil mats protect your product using much less material (foil) for this purpose, and the work is less time-consuming!

HDPE foil - what is worth knowing?

HDPE stands for High-Density PolyEthylene (recycling triangle "02"). HDPE is ecological and biodegradable, considered (next to "05") to be the safest for health, it is used to make toys for children, and to pack dairy or cleaning products. This foil is non-toxic, has good mechanical strength, is resistant to compression and can withstand damage much better. It is resistant to the influence of water and salt, is impermeable to gases, moisture and impurities, has an increased melting point, which is 125 °C.

Ecology in packaging

Pro-ecological regulations and standards are changing companies and customer preferences. The interest in ecological packaging and solutions that reduce the consumption of raw materials is constantly growing. Our foils provide full protection with optimally low material consumption, are lighter than other materials, are designed and manufactured from scratch with a view to the possibility of reuse and subsequent processing - they are recyclable.

Advantages of areoPOUCH air fillers

- low weight - lower cost of transport
- the filling doesn`t crumble, doesn`t stain
- safety, vibration and shock absorption
- protection against temperature changes
- optimally low material consumption

- recyclability, ecology
- easy to store and aesthetic
- perforation allows convenient tearing off
- multiple use

Pack it so that it is nice to unpack ;)

Goods packed well and effectively are the seller's showcase, it is attention to every detail so that the customer is fully satisfied. Now you can do it as best you can, by using foil to create air cushions and mats.

Parameters

Brand	aeroPOUCH
Roll length	300 m
Roll height	400 mm
Film thickness	20 µm
Film type	HDPE (High-density polyethylene)
Number of air chambers per sheet	20 cushions
Mat size (cuttings) (H x W)	325 x 400 mm
